EDUCATION

BSIT

University of Education

Lahore , Pakisan

09/ 2017 - 07/ 2021

Courses

Basic Programming fundamental.
OOP concept, Analysis of Algorithms,
Database Design

INTERESTS

Web App Development

Mobile App Development

React Application

(ReactJs + Routing + Bootstrap + Context API + Netlify)

Build reusable cross-platform components and front-end libraries for future use,Write resilient code that will be continuously tested, deployed, and performed at scale, Contribute to the team's technical direction and the improvement of its tools and processes

Ecommerce Application

(ReactJs + Props + Node +Express + Mongoddb +Git)

React with Functional Components & Hooks ,React router React-Bootstrap UI library,How to structure components, Component level state & props,Managing global state with Redux (Actions & Reducers),Using Redux state in components (useDispatch & useSelector),Working with a MongoDB database and the Mongoose ODM,JWT authentication (JSON web tokens) ,Creating custom authentication middle-ware,Custom error handler.

IT Logger

(ReactJs + Redux + CRUD +Express-validation +jwt+ schema)

IT Logger a responsive webApplication

FrontEnd (ReactJs + Redux + Materialize):

where a developers Add Update Deleted their logs (CRUD) mean do operations.

BackEnd (Node,Express,MongoDb)
